Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6-11, 13 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Zaremba (4,530,313). Zaremba discloses a water pump for cooling an engine in which the impeller 8 is accommodated in a pump housing providing on an engine body and mounted at the end of a rotor shaft 4 comprising: a fitted recess (See figure 1) formed in the impeller for fitting the end of the rotor shaft a least partially within the recess and a bolt 7 inserted through the central portion of the impeller and being threaded in a coaxial direction with the end of the rotor shaft that is in the fitted recess. The impeller further includes an engaging recess in which the head of the bolt is fitted. A seal 9 is mounted relative to the impeller and the rotor shaft. In regards to claim 6, since Zaremba discloses the claimed structure, it is the position of the Examiner that the water pump of Zaremba would be capable of performing the function of applying the bending load on the impeller and rotor shaft as claimed.

CONCLUSION

Allowable Subject Matter

Claims 5 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Watson (4,257,744) discloses an impeller wherein the impeller is providing with a recess for a bolt to engage and a recess for a rotor shaft to engage and the bolt being screwed into the rotor shaft (Figure 1).
